

NEED A SOPHISTICATED SOLUTION? WE'VE GOT YOU COVERED.

Data management by stratEDI.

Our clearing center cctop is a central communications platform that minimizes the work that goes into business processes and logistics as much as possible.

Data to be communicated is entered into cctop, converted into the required format if necessary and forwarded to the receiver – fully automatically, securely and reliably.

▪ Digitalized business processes

cctop creates the basis for you to share and edit business documents both during and after working hours. Transaction times are reduced, the flow of information is more efficient – in times of rising cost pressure, every detail counts. Thanks to uniform templates, the mistake rate is minimized and quick, direct processing brings with it high customer satisfaction.

▪ Logistics on demand

The automated inventory tracking allows any shortages to be filled on demand – avoiding unnecessary inventory as well as unhappy customers due to delivery bottlenecks. Thanks to the system's perfect overview, both outgoing delivery and incoming goods checks are also improved.

▪ Customized: WebSolutions for every scenario

With 20 years' experience and more than 5000 customers, there are some requests that we get all the time. From this pool of requests, we have developed a WebSolutions kit that covers classic WebEDI to automatic generation of SSCC and EAN128 labels, the upload of scanner data and the automatic generation of DESADV (despatch advice) to logistics management.

▪ Be secure: our technology

With cctop, we offer a cloud-based solution that is hosted in Germany. Our high-performance EDI server including backup data mirrors are run in Verizon data centers in Dortmund. Archives are created on NAS systems so that your data is doubly protected.

▪ High degree of freedom – for all

Many different communication methods are available for delivery (X.400, email, ftp(s), AS2 etc.), along with all the relevant notification types (PRICAT, ORDERS, DESADV, INVOIC, REMADV etc.). There is also plenty of flexibility with data formats (cctop-Flatfile, IDoc, openTransXML, GS1-XML, EDIFACT, EANCOM etc.). If users do not have a data export interface, WebEDI also offers a simple solutions that can be integrated.

▪ Useful: Tracking & Tracing

We always go the extra mile when we recognize new customer needs. In spring 2020 we introduced the Tracking & Tracing function. After logging in to our portal tracking.cctop.de, it is possible to see a clear overview of when data was converted and delivered. Here, you can search by invoice or delivery number, which makes controlling business processes much easier.
